

"Combating COVID-19: Spreading Awareness and Distributing Masks and Sanitizers"

at

Kamarpukur Village Area

Organized by

NCC Unit

Sri Ramkrishna Sarada Vidyamahapitha

A awareness programme of Covid-19 was held on and from 12th May, 2021 to 14th May, 2021 at the college campus and college surrounding kamapukur village area. This awareness programme was organized by **NCC unit of Sri Ramkrishna Sarada Vidyamahapitha.**

The importance of spreading awareness about COVID-19 cannot be overstated. By effectively communicating information about the virus, its transmission, and preventive measures, we aim to empower people with knowledge that helps them stay safe. Alongside this, distributing masks and sanitizers plays a crucial role in preventing the spread of the virus. These simple yet impactful tools act as barriers against infection and reinforce the importance of personal hygiene. Our objectives are clear: to convey the message of awareness among individuals, dispel fear through understanding, and encourage responsible actions that protect not only ourselves but also our communities. Through these combined efforts, we strive to create a sense of unity and resilience as we navigate these challenging times together.

In response to the ongoing awareness campaign for COVID-19, a group of 40 dedicated students took the initiative to spread knowledge and precautions within the Kamarpukur village area. Recognizing the significance of safety measures, they embarked on a mission to distribute masks and sanitizers throughout the community.

The awareness program about COVID-19, along with the distribution of masks and sanitizers, has yielded positive outcomes. People have become more conscious of the virus and its prevention measures, leading to better health practices. By having access to masks and sanitizers, individuals are better equipped to protect themselves and others, reducing the spread of the virus. Overall, the program's impact has fostered a sense of responsibility within the community, ensuring that health and safety remain a top priority.
